

The measurement implications of offshore profit shifting*

Fatih Guvenen,[†] Raymond J. Mataloni Jr.,[‡] Dylan G. Rassier,[§] Kim J. Ruhl[¶]

Abstract

We show how the offshore profit shifting of U.S. multinational firms affects the measurement of the U.S. economy. Relative to the unadjusted measures, productivity growth increases, the labor share of income decreases, the trade deficit shrinks, and the return to U.S. direct investment abroad is closer to the return on foreign direct investment in the United States.

JEL Codes: E01, F23, O4

Keywords: Tax havens, formulary apportionment, global imbalances, labor income share

*Date: The statistical analysis of firm-level data on U.S. multinational companies and companies engaged in international transactions was conducted at the Bureau of Economic Analysis, U.S. Department of Commerce, under arrangements that maintain legal confidentiality requirements. The views expressed in this paper are solely those of the authors and not necessarily those of the U.S. Department of Commerce, the Bureau of Economic Analysis, the Federal Reserve Bank of Minneapolis, or the Federal Reserve System.
